

Homework 3  
Due January 30, 2007

**Turn in:**

1. Let  $V$  and  $W$  be vector spaces over a field  $F$ . A *homomorphism* from  $V$  to  $W$  is an  $F$ -linear transformation, i.e., a function  $\phi : V \rightarrow W$  such that  $\phi(v_1 + v_2) = \phi(v_1) + \phi(v_2)$  and  $\phi(\alpha v) = \alpha\phi(v)$ .

An *isomorphism* is a homomorphism that is one-to-one and onto. Prove that the inverse of an isomorphism is an isomorphism.

2. Prove that  $\mathbb{R}$  is a vector space over  $\mathbb{Q}$ , where addition is the usual addition and scalar multiplication is the usual multiplication.

For which values of  $x$  is the set  $\{1, x\}$  linearly independent in this vector space?

**Do not turn in:**

3. Suppose that  $v_1$ ,  $v_2$ , and  $v_3$  are linearly independent. Prove that  $v_1 + v_2$ ,  $v_2 + v_3$ , and  $v_3 + v_1$  are also linearly independent.

4. Let  $V$  be a vector space over  $F$ . Prove that  $0 \cdot v = 0$  for all  $v$  in  $V$ . Prove that  $-(\alpha v) = (-\alpha v)$  for all  $v$  in  $V$  and all  $\alpha$  in  $F$ .
